vb02734@umbc.edu

Based on the Peer Review Feedback and Instructor feedback I have made the following changes for the final turn-in:

- The Introduction I have tightened, by not having the evaluation details in that section.
- Separate section is there for the details of the evaluation methods.
- I have added structure to the paper which enhances readability and easy to track the overall survey.
- Improved some of the synthesis to be appropriately for the papers referred.
- As suggested by the feedback, ensured the point of view (third person or second person) and sticked to it for the overall survey.
- Improved the synthesis which would be adequate to be mentioned in the literature survey.
- Improved the grammatical issues from the literature review.
- Improved few sentences formation which eases the clear understanding.
- Distinguished the synthesis with different sections for easy readability and track of the literature survey.
- Added the further improvements/research scope in the future.
- Added the challenges section which are faced by the text summarization task
- Improved the format specified changes.
